SUBJECT

Storm Overflow Spreadsheet

REQUEST

- Please could you send me the spreadsheet that is downloadable from this page called Modelled Spills May 2024 but include the lat and long of each of the CSOs on the list?
- Please could you also confirm that this is a comprehensive list of all CSOs and emergency overflows? If not, please could they be added, even if they have not spilled. All with lat and long.
- Please could you also add all wastewater treatment works, their names and lat and long.

ANSWER

The Modelled Spills section of NI Water's Storm Overflow webpage, has recently been updated to include, within Column H, the XY coordinates, (Irish Grid system), of all 2,444 of the Company's Storm Overflows, which is the only system of geographic grid references Northern Ireland Water uses in plotting these assets.

To convert from Irish Grid to Latitude and Longitude, many online tools exist e.g. <https://www.dancasey.ie/grid2latlon/>

In association with the above, NI Water have also published Wastewater Treatment Works Treated Discharges May 2024, which again (Column E) includes the XY Coordinates (Irish Grid) of the asset, or the discharge point (Column F clarifies).
