

## **REFERENCE**

2425330

## **RELEASE DATE**

October 2024

## **SUBJECT**

Storm Overflows to Lough Neagh

## **REQUESTS**

1. How many sewage outlets run into Lough Neagh and their locations.
2. The specific quantities of discharge from each outlet.

## **RESPONSES**

### **DIRECT DISCHARGES TO LOUGH NEAGH**

- 106 Storm Overflows are designed to spill excess wastewater directly to Lough Neagh Local Management Area during periods of intense rainfall.
- Treated final effluent from 67 Wastewater Treatment Works is recycled directly to Lough Neagh Local Management Area.

### **INDIRECT DISCHARGES TO LOUGH NEAGH LMA & TRIBUTARIES**

- 730 Storm Overflows are designed to spill excess wastewater indirectly to Lough Neagh Local Management Area and Lough Neagh & Tributaries Local Management Areas (Lough Neagh, Ballinderry, Braid and Main, Moyola, River Blackwater, Six Mile Water and Upper Bann) during periods of intense rainfall.
- Treated final effluent from 359 Wastewater Treatment Works is recycled indirectly to Lough Neagh Local Management Area and Lough Neagh & Tributaries Local Management Areas (Lough Neagh, Ballinderry, Braid and Main, Moyola, River Blackwater, Six Mile Water and Upper Bann).

### **TOTAL DISCHARGES (DIRECT & INDIRECT)**

- Therefore, a total of 836 Storm Overflows are designed to spill excess wastewater directly to Lough Neagh Local Management Area, or indirectly to Lough Neagh and Tributaries Local Management Areas (Lough Neagh, Ballinderry, Braid and Main, Moyola, River Blackwater, Six Mile Water and Upper Bann), during periods of intense rainfall.
- Treated final effluent from a total of 427 Wastewater Treatment Works is recycled directly to Lough Neagh Local Management Area, or indirectly to

Lough Neagh and Tributaries Local Management Areas (Lough Neagh, Ballinderry, Braid and Main, Moyola, River Blackwater, Six Mile Water and Upper Bann).

Annex A attached provides the locations of these assets as requested.

Collectively the works attributed to Lough Neagh deal with wastewater load from homes and business that is the population equivalent of around 580,000 people. They cover the major towns (in alphabetical order) of Antrim, Armagh, Ballyclare, Ballymena, Banbridge, Coalisland, Cookstown, Craigavon, Dungannon, Lurgan, Magherafelt, Portadown and Tandragee.

#### *Volume of spills*

None of the storm overflows have meters to record the volume of spills. Flow meters are very expensive to install and maintain. They can cost up to £150,000 per storm overflow and NI Water endorses the assessment made by Water UK that the cost to install EDMs across the entire network is already significant and the investment required to upgrade this technology to monitor spillage volumes would be more effectively spent fixing the problems, rather than improving their measurement. There may be exceptions to this, depending on circumstances, and NI Water will remain open to these and alert to the application of any lower cost new technologies that may help.

As such, and specific to the disclosure of recorded, non-predictive, storm overflow spill volume data, Regulation 12(4)(a) of the EIR (Information not held) provides that “a public authority may refuse to disclose information to the extent that it does not hold that information when an applicant’s request is received”. All exceptions under the EIR are qualified and so, in deciding whether to disclose the requested information, NI Water must consider the public interest. However, this is not possible where the information is not held.

Whilst NI Water cannot provide recorded, non-predictive, wastewater spill volume data for our storm overflows, we can provide predictive, modelled, spill volume data

per year (m3). For all 2,444 of our overflows, this is available on NI Water's [Modelled Spill data Spreadsheet](#) (last updated May 2024).

To filter the results for specificity to Lough Neagh Management Area, and or Lough Neagh and Tributaries Local Management Area, Column G, "Receiving Water Body Name" should be manipulated so only waterbodies that appeared in the previously disclosed Annex (Ballinderry River (Co. Antrim), Ballinderry River (Coagh), Ballymully River (Ballygonny), Ballymully River (Ratheane), Ballynargan Stream, Brookmount Stream, Clady Water, Closet River, Collin Glen River, Crew Burn, Crumlin River (Crumlin), Crumlin River (Dundrod), Derriaghy River, Derrycaw Stream, Doon Stream, Dundesert River, Dunore River, Glenavy River, Holywell Burn, Ivy Burn, Kingsmill River, Lough Neagh, Lough Neagh Peripherals, Lower River Bann (Toome), Magherafelt Burn, Mourneview Stream, Moyola River (Castledawson), Portmore Lough, Pound River, River Bann (Gilford), River Lagan (Lisburn), River Main (Randalstown), Salterstown River, Sharvogues Burn, Six mile Water (Antrim), Stonyford Reservoir, Tall River (Derrycrew), Torrent River.) are selected.

NI Water currently has no operational EDMs at the storm overflows to record the occurrence and duration of spills to Lough Neagh. The total estimated investment required to deploy EDMs at all direct and indirect storm overflows to Lough Neagh is in the region of £27m. By the end of Price Control period PC21 (link below refers), NI Water expects to have around 300 (40%) EDMs installed across the 724 Lough Neagh-related storm overflows, with the remainder subject to funding being agreed in PC27. Subject to appropriate funding, Lough Neagh Local Management Area (as defined by the Neagh-Bann River Basin Plan for Water Framework Directive) is being prioritised for EDM installs in Phase 3 (Years 5 and 6 of PC21, i.e. April 2025 to March 2027).

DIRECT DISCHARGES TO LOUGH NEAGH LOCAL MANAGEMENT AREA
