RELEASE DATE

December 2024

SUBJECT

Wastewater Flow Compliance & Wastewater sampling

REQUESTS

1. NI Water takes samples at its wastewater facilities. Please provide the results of this sampling, where applicable, for the past 2 years.
2. It has sampled water from wastewater facilities both on an announced and on an unannounced basis. Did these parallel sampling regimes find any disparity between the results?
 - a. What was the disparity?
 - b. Please provide the results for both sampling conditions.
 - c. Please provide any report, document or internal memo discussing the disparity between results arising from these different sampling regimes.
3. What work, if any, has NNI Water undertaken examining the flow compliance of its wastewater treatment works?
 - a. New legislation is due to be implemented which will require wastewater treatment works and CSOs to meet more stringent standards in order to be judged as compliant or acceptable. Has there been any analysis of the impact this will have on NI Water's assets? If so, please provide
 - b. Specifically, how many of NI Water's wastewater assets are currently compliant? How many would comply with the more stringent standards due to be implemented.

RESPONSES

NI Water have added extensive information to the Storm Overflows section of our website, including a document explaining wastewater issues and a map showing the locations and performance of 132 monitored storm overflows. It is our intention that this information will be updated as we learn more about how the wastewater system is performing through the deployment of new monitors and increase the coverage of our modelling studies.

NI Water's annual reports also openly address wastewater performance. In our 2022/23 report, we acknowledged that our current compliance measurement doesn't fully cover flow compliance for treatment plants or sewer networks, noting this as an incomplete view of environmental protection.

Wastewater Regulation Reform

The Northern Ireland Environment Agency (NIEA) are required to lead the Reform process and determine the requirements for the key Regulatory elements. They are advancing initial plans to reform water regulations, including how wastewater compliance is assessed, as noted in the March 2024 Northern Ireland Audit Office Report. This is what is referred as the Wastewater Regulation Reform Programme.

The reform programme looks at four key areas (unannounced sampling, monitoring priority substances, catchment-based outcomes and introducing flow compliance) as explained further below. The overall aim is to bring environmental performance reporting in Northern Ireland into alignment with UK reporting requirements. It is recognised by NIEA that the outcome of the proposed change will result in new evidence, which will highlight potential noncompliance across the NI Water wastewater asset base. This is likely to generate significant investment needs in terms of capital projects going forwards.

You may know from media reports about our already very challenging situation due to longstanding underfunding. While we welcome environmentally beneficial reforms, our ability to deliver change is dependent on being able to access long term funding. For further context, please see our response to the Programme for Government ([NIWPFGRresponse2024.pdf](#)) on our website. I believe we are aligned in wanting adequate investment to ensure a modern, efficient wastewater system that benefits public health, the environment, and the economy.

- 1. NI Water takes samples at its wastewater facilities. Please provide the results of this sampling, where applicable, for the past 2 years.*

The sampling results from 2022 to 2024 year to date (YTD) are provided in Annex A. Col B in the spreadsheet identifies the type of sample and the

regulations they relate to. There are 2 types of samples collected for regulatory compliance assessment; spot samples identified as WOC (Water Order Consent) and composite samples identified as UWWTR (Urban Wastewater Treatment Regulations).

2. *It has sampled water from wastewater facilities both on an announced and on an unannounced basis. Did these parallel sampling regimes find any disparity between the results?*
 - a. *What was the disparity?*
 - b. *Please provide the results for both sampling conditions.*
 - c. *Please provide any report, document or internal memo discussing the disparity between results arising from these different sampling regimes.*

The annual compliance assessment for sanitary parameters (i.e. Biological oxygen demand, suspended solids, ammonia, Total Nitrogen, Total Phosphorus and E. coli) for both the unannounced and announced sampling programmes are presented in the Tables 1 and 2.

Table 1. UNANNOUNCED SAMPLING COMPLIANCE for NI Water assets only for sanitary parameters for period 2022-2024 YTD

	2022	2023	2024 YTD
% compliance by no. works	82.50	86.61	86.19
% PE served by compliance works	97.96	98.20	98.41

Table 2. ANNOUNCED SAMPLING COMPLIANCE for sanitary parameters for period 2022 – 2024 YTD

	2022	2023	2024 YTD
% compliance by no. works	93.75%	93.72%	94.56%
% PE served by compliant works	99.23%	99.19%	99.33%

Unannounced sampling

NI Water supports the shift to unannounced compliance sampling at our largest treatment sites, expected to begin in 2027, subject to funding outcomes.

In preparation, we’re piloting this unannounced approach across select sites to assess its impact and establish new compliance targets for sanitary parameters only. These findings will guide potential operational improvements and inform our PC27 investment plan.

Priority Substances

NIEA intends that the future unannounced sampling regime will also include compliance checks for Priority Substances that are not currently covered yet and are a cause for concern under the Water Framework Directive and so need to be phased out. These include substances contained in landfill leachates.

In respect of your information request for any report, document or internal memo discussing the disparity between results arising from these different sampling regimes, this is considered exempt from disclosure to the wider public domain under Regulation 12(4)(e): Internal communications, Annex B attached refers.

Regulation 12(4)(e) provides that a public authority “may refuse to disclose information to the extent that the request involves the disclosure of internal

communications.” The EIR provides no definition of what can be considered “internal communications”. The Information Commissioner’s Office (ICO) advises that the underlying rationale of the exception is to allow public authorities private thinking space, despite the inherent presumption in favour of disclosure that underpins the EIR.

The public interest in the requested information being disclosed is that it would inform discussion regarding wastewater sampling and wastewater flow compliance.

Against this, NI Water has balanced the interest in protecting the private thinking space of those Senior Managers concerned with deliberating such important matters. Withholding the requested internal communications protects NI Water’s ability to consider courses of action and to make decisions in private without the need for external scrutiny each time. The matter remains live and, as such, relates to ongoing private thinking space. Disclosure to an individual is equal to disclosure to the wider public domain, the world at large, and to have the internal communications of NI Water staff released to such a large audience would inhibit further internal discussion of this matter that is very much of the moment and about which full and frank discussion must continue to be had without external scrutiny. It is NI Water’s opinion that, which this issue remains live the public interest is weighted towards withholding the requested information at this time.

3. *What work, if any, has NI Water undertaken examining the flow compliance of its wastewater treatment works?*
 - a. *New legislation is due to be implemented which will require wastewater treatment works and CSOs to meet more stringent standards in order to be judged as compliant or acceptable. Has there been any analysis of the impact this will have on NI Water’s assets? If so, please provide.*
 - b. *Specifically, how many of NI Water’s wastewater assets are currently compliant? How many would comply with the more stringent standards due to be implemented.*

Flow Monitoring

Water Order Consent (WOC) standards are set by NIEA to control the discharge of wastewater. NIEA recognises that flow requirements within the WOCs need updating to align with UK standard. NIEA is leading the work that will provide us with clarity on the flow monitoring systems we must install to record the volume treated and the use of Event Duration Monitors to determine what is happening at the boundary of the works.

As flow is not part of NI Water's regulatory compliance regime at this time, we do not have sufficient information at present to make an accurate and full assessment of wastewater treatment works flow compliance (how many of NI Water's wastewater assets are currently compliant and how many would comply with the more stringent standards due to be implemented) as per NIEA's draft Regulatory Operational Guidance on Assessing Flow Compliance at Wastewater Treatment Works under the Water Order (NI) 1999. Regulation 12(4)(a) (Information not held) of the EIRs provides that a public authority may refuse to disclose information to the extent that it does not hold that information when an applicant's request is received. All exceptions under the Regulations are qualified and so, in deciding whether or not to disclose the requested information, NI Water must consider the public interest. However, this is not possible where the information is not held.

In order to undertake a full compliance assessment in accordance with NIEA's Draft Regulatory Operational Guidance, additional monitors are required to be installed on each of the storm overflow points (such as the storm tanks and boundary overflow point). These additional monitors, referred to as Event Duration Monitors (EDMs) are currently not in place at any of our Wastewater Treatment Works. The flow assessment involves demonstrating that the works is treating the required volume on occasions when the storm overflow is operational.

NI Water hold measured flow data (total daily volume) for treatment works where flow monitors exist. The verified total daily volume flow data is shared with NIEA on a monthly basis. We do not have instrumentation at all sites or the full range of instrumentation required to undertake the flow compliance assessment in line with the Draft Regulatory Operational Guidance indicated above. The Draft Regulatory Operational Guidance sets requirements for the assessment of both dry weather flow (DWF) and flow to full treatment at the time of the storm overflow operating (FFT). The latter requirement not only requires flow monitors, but also event duration monitors (EDMs) at storm overflows within the WwTWs. At present NI Water does not have any EDMs installed at WwTWs. NI Water support a transition to monitoring and measuring flow compliance – in order to do this we need to install monitors in the first instance and to understand the parameters NIEA will have to set for each asset. This work was being progressed under the Water Reform Project during PC21 for implementation during PC27. However, much investment in WW assets has been paused as funding has not been allocated.
